RevenueFlow

The reception desk that **actually listens**.

Voice-first WhatsApp reception for Latin American small businesses.
Built on AssemblyAI.

revenueflow-ai-yanero.vercel.app

THE PROBLEM

In Latin America, customers don't type. They talk.

A voice note arrives at 8pm. The clinic is closed.
Every CRM shows it as a grey box that says “audio message”.

By morning, that customer booked somewhere else.

WHY NOW

WhatsApp isn't a channel. It's the phone.

PENETRATION

~90%+

of people in major LatAm markets

TOOLS THAT READ VOICE NOTES

0

every CRM stops at the grey box

PEOPLE ANSWERING

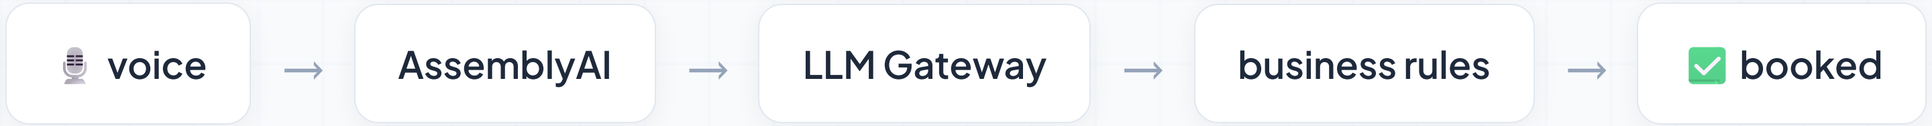

1

usually the owner

Penetration figures: cite your source here before submitting.

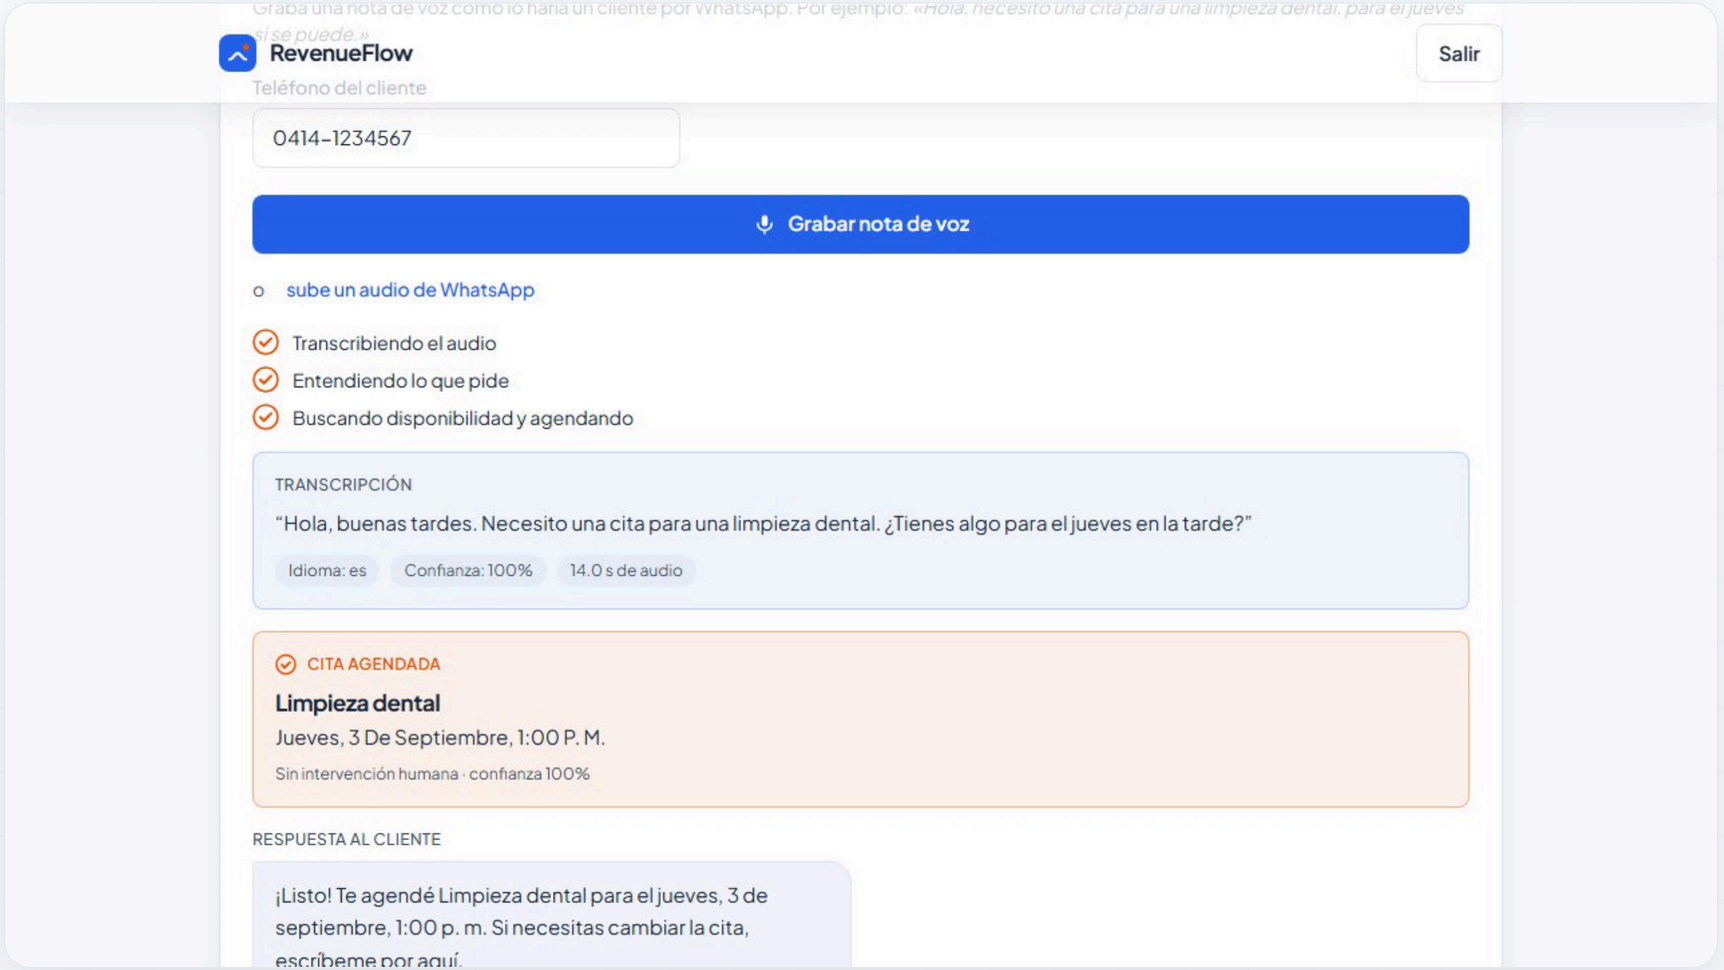

THE SOLUTION

From a voice note to a booked appointment.

No forms. No menus. No “press one for appointments”.

LIVE DEMO

Spanish voice note → transcription → intent → real calendar → booked. Under 10 seconds.

HOW WE USE ASSEMBLYAI

One API key. The whole pipeline.

Universal-3.5 Pro	Spanish and Portuguese · 100% confidence on the demo note
`keyterms_prompt`	Biased with the clinic's **own service catalog**
`prompt`	Describes the scene: customer, vertical, country
LLM Gateway	Intent extraction against a strict schema

THE ARCHITECTURE DECISION

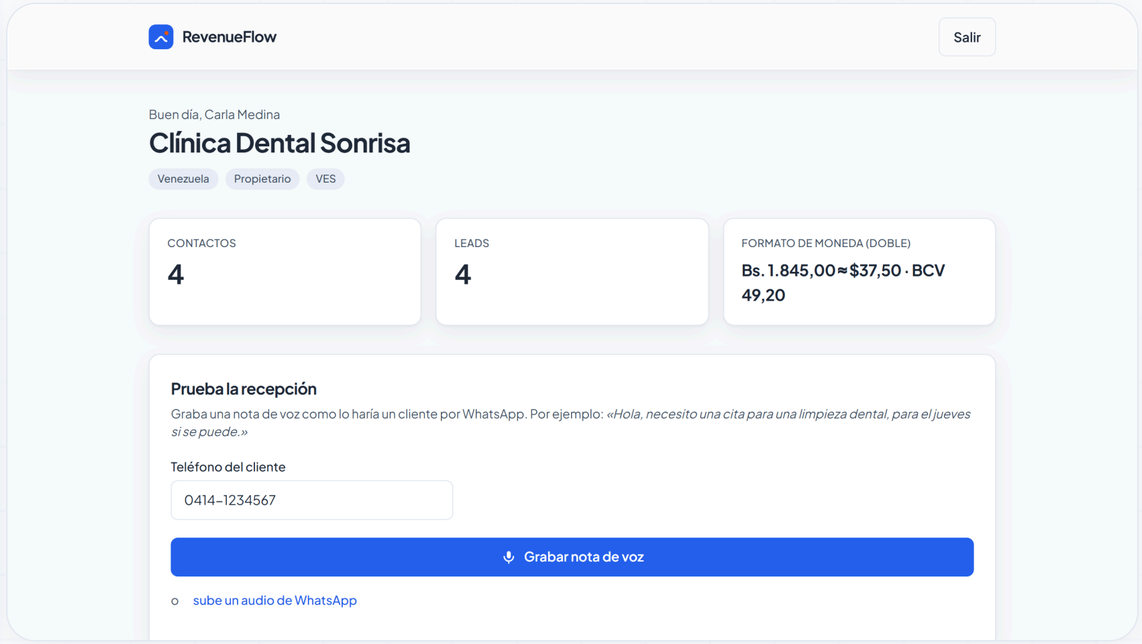

The model decides what the customer wants. The system decides what's allowed.

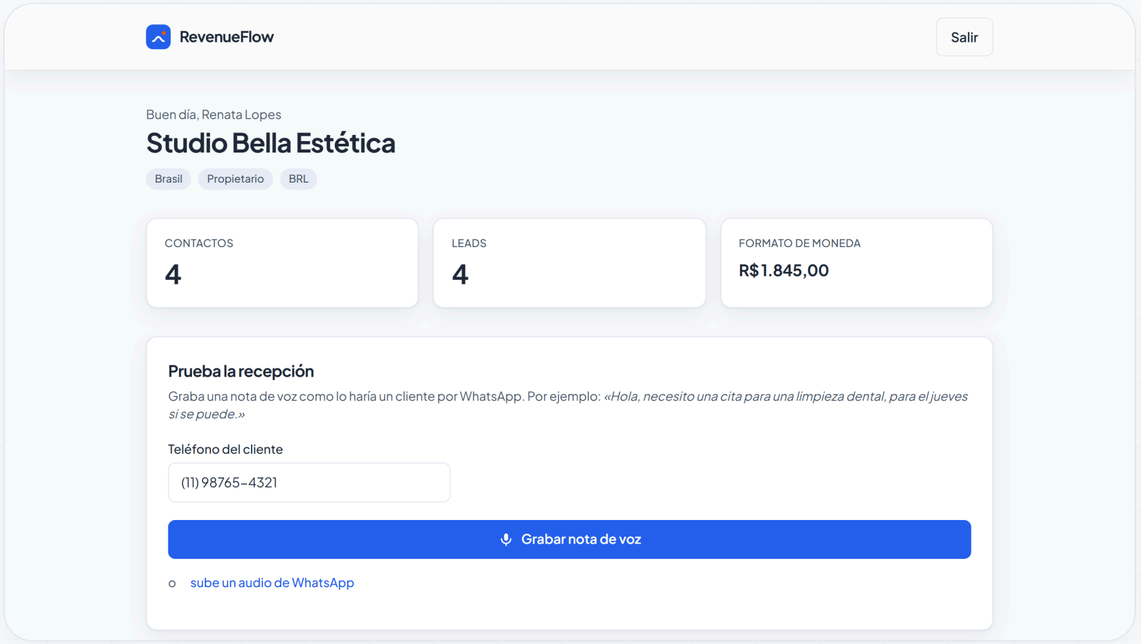

- ✕ It cannot invent a service — only picks from the catalog
- ✕ It cannot invent a date — returns a weekday, we compute the date
- ✕ It cannot invent availability — the slot comes from the database

Complaint, payment or doubt → escalates to a human and stops.

MULTI-COUNTRY FROM LINE ONE

Same engine. Two markets.

Adding a country is writing one file — not rebuilding the product.

NOT A PROTOTYPE

Built to survive a real business.

84 tests	including tenant isolation verified against the live database
Row Level Security	on every table — audited automatically by a test
Idempotent ingestion	WhatsApp retries webhooks; we never transcribe twice
Audio metered	per second — at $30/month the margin is decided there
Deployed	public, open source, continuous deployment

WHAT'S NEXT

Real WhatsApp numbers. Automatic no-show recovery. Colombia, Mexico, Peru.

Latin America runs on voice notes.

RevenueFlow is the first reception desk that actually listens.
